

## **Net native migration proportions by age and sex, Registration Districts, 1851-91**

The following four sets of tables provide the net native migration proportion (the number of net migrants in a decade as a proportion of the population in the preceding census) for men and women by age for the Cornish Registration Districts in the four decades from 1851-91.

For the method of calculating these see Andrew Hinde, 'The use of nineteenth-century census data to investigate local migration', *Local Population Studies* 73, 2004, pp.8-28 and Bernard Deacon, 'Reconstructing a regional migration system: net migration in Cornwall', *Local Population Studies* 78, 2007, pp.28-46.
