The medicalisation of happiness:

a history of St. John’s wort

Submitted by Leah Songhurst, to the University of Exeter as a thesis for the degree of Doctor of Philosophy in History, September 2010.

This thesis is available for library use on the understanding that it is copyright material and that no quotation from the thesis may be published without proper acknowledgement.

I certify that all material in this thesis which is not my own work has been identified and that no material has previously been submitted and approved for the award of a degree by this or any other university.
Abstract

This thesis explores the histories of mild to moderate depression and the use of over the counter (OTC) St. John’s wort (St. John’s wort) during the 1990s. In doing so it not only investigates the diagnosis and definition of mental illnesses, it also raises questions about the interface between conventional and alternative medicine. Using a variety of printed sources, including popular media articles, scientific and medical journal publications, and St. John’s wort self-help books, a number of historical themes are explored.

This thesis takes issue with existing medical historical studies of depression. Firstly it is argued that they have presented progressive depression histories. Secondly, it is suggested that they have retrospectively diagnosed depression on the basis of similar symptoms. It is therefore argued that illness is specific to the time in which it exists and should be understood within its own historical timeframe.

During the 1990s standardised St. John’s wort was promoted as a natural and safe remedy. Adverts and media reports also highlighted the fact that it had a long medical history. Although this thesis establishes that the plant has been traditionally used to treat physical illnesses, it seems that a growing distrust of conventional antidepressants, combined with an established interest in alternative medicine, encouraged some lay people to use the remedy to treat mild mood disorders.

It is further argued that lay people have a history of self-treating minor mental illnesses using preparatory and OTC remedies such as preparatory nerve tonics. Not only did lay people desire autonomous treatments, it also seems that standardised St. John’s wort provided a functional role as an OTC remedy. By the 1990s the concepts of responsible self-care and self-treatment were being actively encouraged by medical authorities. Therefore this thesis reclassifies the passive mild to moderately depressed patient as an active consumer.

Following an analysis of the popular media it is suggested that the 1990s coverage of depression and its treatments was confusing. Indeed, depression and its
treatment with conventional medicines and St. John’s wort were sometimes presented as part of a wider lifestyle choice. Finally, it is argued that by the 1990s standardised St. John’s wort received the same scientific and medical scrutiny as conventional medicines. It is therefore suggested that the remedy represents a situation in which the boundaries between conventional and alternative medicines have become increasingly indistinguishable.
Acknowledgments

Thank you to Professor Mark Jackson and Dr. Pamela Dale for your constant support. Thank you also to the Centre for Medical History Admin Support team for keeping me in check and for entertaining Arthur!

Thank you to those that gave their time to be interviewed. Your personal accounts of overcoming and managing your depression symptoms, and your ideas on the use of OTC remedies, have been invaluable in shaping this thesis.

Thank you to J-P, Arthur and Family Songhurst for your patience and uncomplaining encouragement.

Finally, thank you to David White for your generous donation towards fees. Thanks also to the attendees of Wiltshire Mind's Tuesday drop in group for the appreciated supply of doughnuts and crème caramels and to Adam for the emergency fruitcakes.

Abbreviations 7

Chapter 1. Introduction
  1.1. Introduction 8
  1.2. Overview of the historiography of the period 13
  1.3. Themes and Structure 25

Chapter 2. Histories of depression
  2.1. Introduction 32
  2.2. Depression in the 1990s 33
  2.3. Minor mental illnesses and the use of preparatory medicines 46
  2.4. Conclusion 66

Chapter 3. Histories of St. John’s wort
  3.1. Introduction 68
  3.2. The dissemination of St. John’s wort’s medical history: confusion surrounding 1990s standardised St. John’s wort and the plant St. John’s wort 70
  3.3. St. John’s wort’s history and a discussion of primary sources 73
  3.4. Magic marketing and the re-branding of a ‘troublesome weed’ 86
  3.5. Conclusion 99

Chapter 4. An examination of 1990s St. John’s wort self-help literature
  4.1. Introduction 100
  4.2. The 1990s St. John’s wort self-help books, themes and ideas 102
  4.5. Conclusion 136
Chapter 5. Media representations of depression and standardised St. John’s wort

5.1. Introduction 141
5.2. Media attitudes to depression 142
5.3. OTC St. John’s wort and the popular media 153
5.4. The popular media’s coverage of the regulation of OTC St. John’s wort 165
5.5. Conclusion 177

Chapter 6. Professional responses to St. John’s wort

6.1. Introduction 178
6.2. The examination of St. John’s wort, the development of the pharmaceutical industry and the scientific investigation of St. John’s wort 181
6.3. The widening British and American awareness of St. John’s wort 195
6.4. OTC St. John’s wort an alternative medicine? 209
6.5. Conclusion 216

Chapter 7. Conclusion

7.1. Introduction 218
7.2. Overview of the main findings 221
7.3. Where now? 228
