Leaders’ Personal Performance and Prototypicality as Interactive Determinants of Social Identity Advancement

Submitted by Niklas Steffens to the University of Exeter

as a thesis for the degree of

Doctor of Philosophy in Psychology

In May 2012

This thesis is available for Library use on the understanding that it is copyright material and that no quotation from the thesis may be published without proper acknowledgement.

I certify that all material in this thesis which is not my own work has been identified and that no material has previously been submitted and approved for the award of degree by this or any other University.

The present thesis is a result of an endeavour that started in October 2008 in a small,
cosy office in the North Tower of Washington Singer Laboratories. It then took me shortly
to the cognitive (but sociable) research group on the second floor and the South Tower,
before it came to an end in the same charming tower in which it had started. Over the
course of this endeavour, I made a lot of friends without whom — and their tremendous
help, support, and encouragement — I would not have been able to complete writing this
thesis.

I would like to thank Alex Haslam who has been inspirational throughout the
process of completing this thesis. Alex has provided me with novel perspectives, ‘twists’,
and insights as well as with detailed feedback that was always ‘spot-on’ and incredibly
supportive in the progression of this thesis (I still enjoy reading all the funny short
‘leitmotifs’ that Alex wrote on slips of paper and that decorate my pin board). More
generally, Alex has always encouraged me not only to ‘get to the bottom of things’, but also
to sharpen my thinking and develop my understanding as a developing researcher. I am also
grateful to Thomas Kessler who has always provided me with unflagging encouragement as
well as with a different angle and a fresh perspective. Thomas has given me sound insights
into ‘thorny’ methodological issues and always encouraged me to draw new associations
between my work and other fields of research. I am thankful to Michelle Ryan who has
supported me not only by providing a distinctive point of view and concise feedback, and
by bringing up new ideas but also as a mentor in my advancement as a researcher.
Michelle’s continuous enthusiasm was not only enjoyable to experience but also motivating
and inspiring.
I am also thankful to Thomas Morton who often provided me with very helpful and succinct advice concerning theory and statistics. For their very valuable support and advice I am also thankful to Joanne Smith, Kim Peters, Tim Kurz, and Manuela Barreto.

Moreover, I had many fun moments with friends and office-neighbours in ‘the Social Tower’. I am thankful to Alex Butler, Dale Weston, David Crelley, and Diana Onu for sharing our experiences, refreshing and relaxed chats, and their extremely helpful support throughout the time we resided in this tower. In addition, I am also grateful to Charlotte Forrest, Felice van t’ Wout, Heike Elchlepp, and Tobias Stevens who, since the start of my PhD, have born with me whenever I strolled through Washington Singer in order to visit the cognitive research group (for research or procrastination purposes). Finally, I thank my flatmates (Sam and Tobs), friends, and family — in particular my parents — for tireless patience and encouragement.
Abstract

This thesis examines the impact of leaders’ personal performance and prototypicality on their ability to champion a social identity by advancing shared group interests. With this in mind, general theories of leadership and followership are reviewed as well as theories of leaders’ performance more specifically. As a framework for understanding leaders’ role in managing shared identity, we then discuss the social identity approach and its application to the field of leadership.

In three studies (Chapter 3), we examine the interactive effect of leaders’ prototypicality and personal performance on followers’ evaluations of their leadership. Studies 1 and 2 show that the impact of leaders’ performance on followers’ favourable reactions to their leadership (in terms of group advancement, trust in the leader, and leader endorsement) is more pronounced when leaders are prototypical, rather than non-prototypical, of followers’ ingroup. Study 3 provides evidence from the field that this interaction between performance and prototypicality also impacts on followers’ perceptions of leader charisma. Moreover, there is evidence that this impact can be explained, in part, by the degree to which followers perceive leaders to advance shared group interests. Results suggest that highly prototypical leaders who display elevated, rather than average, performance are responded to more favourably because their performance is perceived to advance a shared social identity.

Although our first three studies demonstrate that we can disentangle leaders’ performance and prototypicality in order to examine their interactive effects, this does not mean that these two things are independent. Studies 4-6 (Chapter 4) provide evidence from the field and the laboratory that followers associate the performance of leaders with their prototypicality. A field study indicates that followers’ perceptions of leader performance
and prototypicality are indeed positively related (Study 4). Moreover, experiments suggest that while followers infer a leader’s prototypicality from his or her performance (Study 5), their evaluation of a leader’s performance is also influenced by his or her prototypicality (Study 6). Studies 5 and 6 also indicate that leaders’ performance and prototypicality determine their capacity to engage in identity entrepreneurship by changing ingroup norms and ideals. In this way, results suggest that leader performance and prototypicality are not only bidirectionally related but are also important factors that contribute to a leader’s capacity to craft present and future understandings of a social identity.

In the third empirical chapter (Chapter 5), we examine the impact of evaluators’ status as either internal or external to a group on assessments of leader prototypicality and performance. Study 7 shows that compared to external evaluators, internal evaluators are more likely to perceive highly prototypical low-performing leaders to advance the group more than low-prototypical high-performing leaders. Study 8 also demonstrates that internal (but not external) evaluators perceive highly prototypical leaders as more likely to advance the group compared to their moderately prototypical counterparts. Results suggest that these differential evaluations are primarily attributable to internal evaluators’ increased responsiveness to prototypicality such that they are less willing than external evaluators to forgo leaders’ prototypicality in exchange for their outstanding performance.

Taken together, the thesis supports a complex model in which leader effectiveness is determined by followers’ appreciation of leaders’ prototypicality and performance against the backdrop of their perceived capacity to realize shared goals and ambitions. The present thesis extends theories that emphasize the importance of leaders’ exceptional performance. It shows that leaders’ extraordinary capability is of limited value if they fail to demonstrate their alignment with followers. In successful leadership these two go
together such that leaders must be seen to promote ‘our’ ambitions and to be able to realize them. Theoretical implications for leadership theories and practical implications for organizational practices are discussed.
# Table of Contents

Chapter 1 Contemporary theories of leadership .................................................... 17
   Defining the subject of leadership ........................................................................ 19
   Individualistic theories of leadership ................................................................. 20
      * Trait and behavioural theories of leadership .................................................. 20
