

Open Exeter

What is research data? How do you use it?

The **Open Exeter** project is investigating how research data is created, managed and used across the University in order to create an institutional data repository for all types of research data. We will also implement training and guidance for researchers and review and ratify institutional policy on research data.

We need the help of researchers and PGR students to enable us to understand what kind of data you are using, how much data you store, and what type of training would be useful for you.

Take part in our survey and you could win a top-of-the-range Kindle!
