

SPOONER'S PROTEAN VIEWS,
MOUNT VESUVIUS.

The Mountain is first seen on a clear summer's evening in perfect repose with a thin vapoury cloud ascending from the Crater. On holding the view before a bright light the scene changes to Midnight — an Eruption of the Volcano has taken place which illuminates the surrounding objects with a fiery brightness while the liquid lava is seen streaming down the sides of the mountain.

LONDON **SOLD BY C. MURTON, Stationer, &c.** 377 STRAND.
(12, St. Martins Court.)
