ABSTRACT

This study examined the orientations to cultural difference of sojourner educators in the Foundation Program at Qatar University to determine if orientations were correlated with select demographic and experiential variables, including gender, age, time overseas, education level, formative region, ethnic minority status, job position, length of time in Qatar, intercultural marriage, default language, formal teacher training, and overseas development organization experience.

This study used a sequential mixed-method design. Perceived and Developmental Orientations were measured using the Intercultural Development Inventory© (V.3), which produced a measure of each respondent's orientation to cultural difference. Focus group interviews were conducted to engage participants in explaining and interpreting the findings. Five focus groups of three to six participants each were conducted.

Most of the teachers were found to operate from within the transitional orientation of Minimization, although individual scores ranged from Denial to Adaptation. On average, the educators were found to overestimate their orientations by 31 points. A positive correlation between orientation and formative region was found, with participants from North America showing the highest orientation. Statistically significant differences emerged for orientations when comparing Middle East and North African (MENA) and North American formative regions.

Formative region was found to account for 4.8% of the variance in orientation and is a significant fit of the data. Focus groups participants speculated that (a) core differences regarding multiculturalism in MENA and North American cultures help explain the results, (b) aspects of the workplace culture and both the broader MENA and local Qatari culture encourage a sense of exclusion, and (c) external events further complicate cross-cultural relations. The study findings add to the literature by providing

baseline orientation data on sojourner educators in post-secondary education in the GCC region, and by confirming some of the findings of similar studies.

The study provides practitioners with suggestions for staffing and professional development. Future research should focus on the measurement of orientations in broader samples of educators, changes in orientation over time in Qatar and other cultural contexts, differences in orientation among short-term vs. long-term expatriates, the impact of employment systems and societal structures on orientations in sojourner educators, the impact of educator orientation to cultural difference on student achievement, and the design of effective cross-cultural professional development for educators.

Key Words:

Intercultural Development Inventory, intercultural competence, intercultural sensitivity, Qatar, sojourner, orientation to cultural difference

ACKNOWLEDGMENTS

This work would never have been finished without the support of family and friends who offered advice and guidance during this long and bumpy journey. It is not possible to complete an undertaking such as this without the support, guidance, encouragement, and assistance of many.

I am particularly grateful to my colleagues at Qatar University for their willingness to participate in this study. Response to the survey tool was strong, and many interesting conversations resulted from my colleagues' interest in this topic. I am in their debt for setting aside time from their hectic schedules to participate in my study. Thank you.

A special thank you is due to David Moran for sharing his ability with graphics software. Without him, I'd probably still be trying to rotate arrowheads. Equally, this work would not be what it is now without the feedback and support of Dr. Angela Stokes.

I thank my supervisors, Dr. Andrew Richards and Dr. Fran Martin, for pushing me to consider my unexamined assumptions and for forcing me out of my intellectual comfort zone. I am sure that they had more enjoyable ways to spend afternoons than talking to me on Skype.

I also thank Dr. Mitchell Hammer, Debra Freathy, and IDI, LLC, through whom a portion of this thesis was supported. Your support and guidance were invaluable.

Finally, to my wife, Mecil Café-McKay, I owe you indescribable gratitude for your support and forbearance during my evenings and weekends in front of the computer, and especially for your tolerance of my "grumpiness" when my writing wasn't going smoothly. *Mahalkita, bei.*

DEDICATION

This work is dedicated to all sojourner educators in Qatar. I hope that this work highlights your experience in Qatar, and that it provides suggestions for meaningful change.
